Columbia in a Squall

By George Davidson

This painting shows the *Columbia Rediviva* heeling to the side as it approaches a squall. It was painted in 1793 by amateur artist George Davidson, the *Columbia*’s painter. This illustration gives a sense of the danger associated with the long voyages at sea undertaken by maritime fur traders.

The *Columbia Rediviva*, an 83-foot-long, 212-ton ship, left Boston Harbor for the Northwest Coast on October 1, 1790, with a complement of thirty-one men and boys. It was her second voyage to the Northwest Coast in search of furs. Robert Gray captained the ship; his first officer was Robert Haswell, a twenty-one-year-old native of Massachusetts. The youngest member of the crew was Samuel Homer, a cabin boy who was probably eleven or twelve when the *Columbia* left Boston.

The voyage to the Northwest Coast from Boston took a full eight months, during which time the *Columbia* encountered numerous storms. The *Columbia* came close to disaster in January 1791 while cruising off the southeastern coast of South America. John Hoskins, the ship’s supercargo, wrote that the weather suddenly grew “thick and hazy, the wind increas’d into a strong gale, and the sea became mountainous.” They were driven uncontrollably into shallow waters; however, Hoskins wrote, “Captain Gray very prudently ordered their to be no sounding; as it would only increase our fears, without a possibility of lessening our danger. thus was our situation truly alarming; there being to all appearance but a short space between us, and eternity…. The storm finally abated late that evening, and the *Columbia* was able to continue along its way with minimal damage.

Storms were not the only danger the crew of the *Columbia* faced. During the long journey to the Northwest Coast most of the men came down with scurvy, a potentially fatal disease caused by a lack of vitamin C in the diet. Hoskins wrote in his journal: “there is scare a person on board the ship but what has felt, more or less, the baneful effects of this dreadful distemper….”

After nearly three years at sea, the *Columbia* returned to Boston on July 25, 1793, with all but four of her original crew. Three had been killed by Natives in present-day Alaska, the fourth died of dysentery. Although most of the *Columbia’s* crew managed to return safely, several were not so lucky on subsequent voyages, including John Hoskins and George Davidson, both of whom were lost at sea in 1801.
