

Paiute Water Basket

By Unknown

The Paiute peoples of the Great Basin are widely known for their basketry, a fine example of which is shown above. This basket, probably made in the nineteenth century, was used by the Paiute to carry and store water, a precious resource in the arid Great Basin country. It is in the collections of the Oregon Historical Society and is currently on display in the award-winning "Oregon My Oregon" exhibit.

The Native peoples of North America made use of three basic techniques for making baskets, plaiting, coiling, and twining. The most popular method among Oregon's Native peoples, twining, was used to make the basket shown above. Twining involves wrapping and twisting two or more flexible horizontal elements—called wefts—around a set of vertical elements—called warps. Archaeologists have found twined basketry that is more than 9,000 years old in Oregon's Fort Rock area.

The body of the basket above is probably made of willow or sumac fibers. A native plant fiber was used to make the rope handle, which is attached to the basket by horsehair loops. This particular basket has also been repaired with a piece of denim at the bottom.

Tightly woven water baskets like this one would have been covered in clay and hot pitch to make them practically waterproof. Paiute water baskets came in a variety of shapes and sizes, though all were light and resilient. This basket is on the smaller end of the scale, but some water baskets could carry five gallons of water or more.

Shaped somewhat like a gourd, the basket was done in a traditional style. With a pointed bottom, a broad middle, and a narrow opening, traditional water baskets were designed not to spill when resting on their sides. As the Paiute interacted with settlers and miners beginning in the mid-nineteenth century, however, the shape of their baskets changed. Some examples of nineteenth-century Paiute water baskets are shaped like the brown jugs miners carried with them, while others are modeled after the canteens in which soldiers carried their water.

Besides water baskets, the people of the Great Basin also made a wide variety of other basketry, including clothing, cradles, fish traps, mats, winnowing baskets, and general use burden baskets. Many of these items are still being produced and used by modern Paiute peoples.
